

Plants that Attract **Butterflies & Hummers**

“Where People who Love to Garden, Love to Shop”™

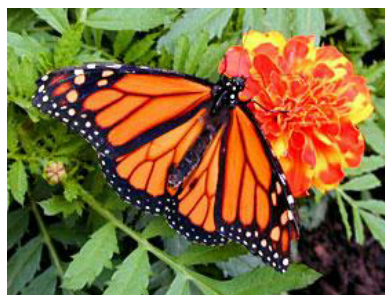

Butterflies and Hummingbirds are welcome visitors to gardens. Choose the right plants and you can encourage them to stay, entertain and amaze. Butterfly larvae and caterpillars need plants for food and adult butterflies need plant nectar. Sunny areas with shelter from the wind containing amenities such as garden mulch, rock crevices, brush piles, even weeds are the most welcoming gardens to butterflies.

Hummingbirds ingest half their weight in food every day. Flowering plants provide the nectar, and tiny insects provide the protein busy hummingbirds need to keep going. Hummingbirds visit a large array of plants, but especially enjoy any plants that display a tubular shaped flower that is brightly colored. Strategically place a feeder surrounded by these suggested plants and enjoy as more and more humming visitors attend the banquet. This plant selection is meant to be a starting point, but more choices are available seasonally.

Flowers & Grasses

Aster
Astilbe
Bee Balm
Borage
Blanket Flower, Gaillardia
Butterfly Weed, Asclepias
Candytuft
Columbine
Cornflower, Echinacea
Coral Bell
Coreopsis
Cosmos
